

Comprehensive Attack Surface Management

What's the risk?

When evaluating Sevco, **95% of enterprises discover they only have security controls for 90% of their asset ecosystem.** This introduces critical security gaps and elevated risk of a data breach because you can't protect what you don't know you have.

Economic impact

Customer PII is the most common type of record lost, included in **44% of breaches.** It's also the **costliest record type, at \$180 per lost or stolen record.**¹

Complex enterprise environments are increasingly experiencing incomplete security coverage with upwards of **19% of assets that have missing or stale security controls** like endpoint protection and patch management.

To understand gaps in your security coverage, you need a complete inventory of all your IT assets. Sevco Security can help.

"Sevco allows us to quickly understand where there may be holes in security, patch management, and network access control. The product has the ability to answer so many questions in one place and is simple and straightforward to deploy."

Optimize your security control coverage

As organizations innovate and expand their asset footprint, Sevco Security's asset intelligence provides seamless visibility into the security state of your assets that lets you move quickly to address business needs without introducing security risk.

Our solution provides critical insights on asset security controls, allowing you to identify gaps in coverage and proactively protect the previously unknown attack surface. This also empowers you to manage internal governance and regulatory compliance requirements to monitor and validate that your security investments are fully deployed.

Get fast insights into your security gaps

Our attack surface dashboards make it easy for you to quickly answer:

- Do all assets have protection coverage from the security solutions in which our organization has invested?
- When was the last time the security control checked in on each asset?
- Does the coverage execute as expected?
- Which user is associated with the device (and do they represent a higher risk)?

Sevco Security in Action: Closing Security Gaps

Sevco Security provides a modern approach to asset intelligence that strengthens your security posture by automatically aggregating your inventory sources to give you a complete, accurate, and real-time view of your environment.

Close gaps in endpoint security coverage

Uncover any of your EP, EDR, and XDR tools that aren't deployed where you expect them to be.

Get the most out of your vulnerability management

Identify assets that aren't getting scanned by your vulnerability monitoring solution.

Track scan frequency

Identify the frequency of security scans across your asset environment and uncover assets that are having issues with scan frequency.

Document security monitoring for compliance and governance

Gain granular visibility to ensure all your assets have the intended coverage for security monitoring compliance. Readily validate and document that those missing coverage, like legacy systems, are intentional.

About Sevco Security

Sevco is the cloud-native CAASM platform delivering the industry's most accurate, real-time IT asset inventory. Hundreds of companies rely on Sevco's 4D Asset Intelligence engine to bridge the gap between IT and security teams. By providing a continuously updated inventory of assets, Sevco autonomously identifies and closes previously unknown security gaps, while dramatically improving incident response. Sevco's patented asset telemetry uncovers significant security gaps and out-of-compliance assets in every deployment without fail. Founded in 2020 and based in Austin, Texas.
