DATASHEET

Sevco Asset Intelligence Platform

"Sevco Security's ability to report believable metrics across the entire vulnerability lifecycle is powerful and utterly unique. A closed ticket doesn't mean a vulnerability was actually fixed. Sevco surfaces those challenges, allowing teams to collaborate across departments to continuously improve our security posture and mature operations."

Jeffrey M. Vinson, Sr.
Former CISO
Harris Health

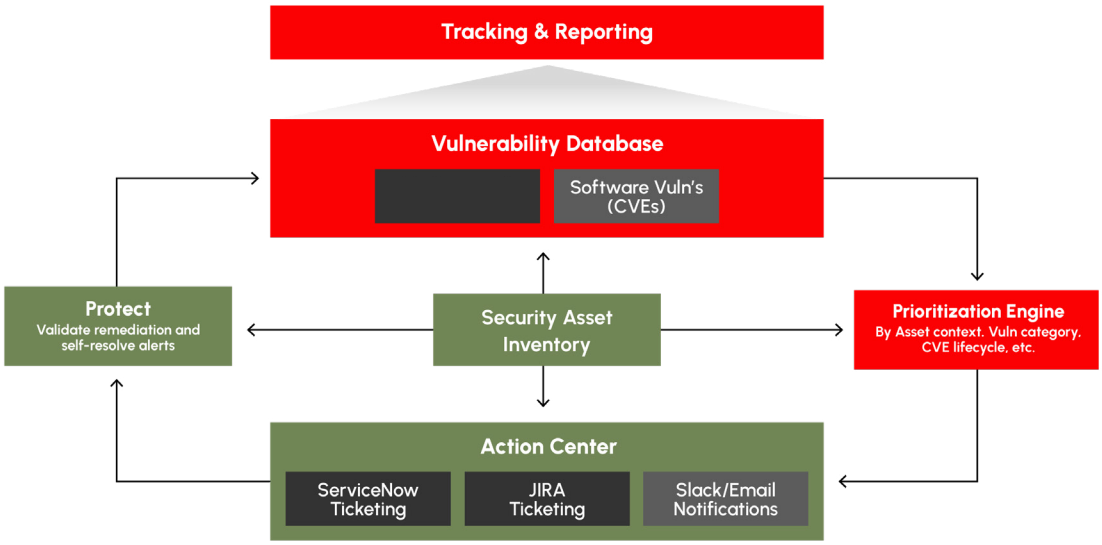
Sevco at a Glance

- Take the most impactful actions to reduce risk within the organization.
- Drive accountability in the remediation process by tracking completion and duration metrics.
- Report vulnerability program metrics and gaps to drive increased security program budget.

A complete and trusted asset inventory is fundamental for full-cycle vulnerability management

Built on the foundation of a complete asset inventory, Sevco's Asset Intelligence Platform identifies exposures, including software and environmental vulnerabilities like missing security tools and IT hygiene issues. Sevco enables organizations to protect the modern attack surface by proactively prioritizing, automating, and validating the remediation of exposures.

Visibility at every stage of the vulnerability lifecycle



Key Benefits

All vulnerabilities in one place–prioritized with intelligence

- View all classes of vulnerabilities—software and environmental vulnerabilities like missing security controls—in a unified vulnerability inventory
- Prioritize by technical severity and impact to the business
- Surface CVEs without the need for any agents or vulnerability assessment tools

Automate and validate remediation state

- Automate remediation through outbound integrations to your existing tools and processes
- Validate when remediation is observed on the asset—not when a ticket is closed
- Uncover incomplete remediation to drive cross-team accountability and process improvements

Measure and manage risk mitigation performance

- Track metrics like mean time to remediation (MTTR), compliance with remediation SLAs, and patch efficacy
- Drive process maturity by identifying recurring issues
- Gain real-time, org-wide visibility into the state of your security posture

Vulnerabilities lurk without visibility

The Sevco platform integrates seamlessly with your existing security stack to consolidate all vulnerabilities in one place. Through a complete asset inventory, Sevco uncovers missing tools as a critical vulnerability: without vulnerability and patch management agents, assets will be missing from scans for CVEs or remain unpatched, for example.

With Sevco, you can prioritize the most critical issues across the environment, automate the remediation to fix priority issues, and validate the efficacy of remediation efforts. View detailed tracking of issues by date – with timestamps when issues surface, when action is taken, and when remediation is actually complete.

Exposure Management

Severity: Based on risk to the environment

Open: Number of assets impacted by vulnerability needing action

Total: Total number of assets impacted by vulnerability including those that are snoozed or accepted as risky

Avg age & compliance: Avg number of days assets have been associated with vulnerability and impacted assets within or outside SLA

Status detail of impacted assets

7-day change: Increase or decrease in the number of assets based on remediation effectiveness and new findings

View, add, or change actions like automated remediation workflows

Additional vulnerability description and details including observation, impact, and recommendations
